Introduction to Applications in C#

Assignment 7

1. **Windows Forms**. Create a Notepad-like application with these features:

| TextBox | A multiline text box where the user edits the text. |
| --- | --- |
| File/Open menu option | Opens a file and displays it in the text box. Hint: Remember System.IO.File.ReadAllLines. Hint: The TextBox has a Lines property. |
| File/Save menu option | Save the contents of the text box in text (.txt) file. Hint: Remember System.IO.File.WriteAllLines. Hint: The TextBox has a Lines property. |
| Help menu option | Display a form with help. |
| Edit/Font menu option | Lets the user select the font of the text box. Hint: Use the FontDialog. |
| File/Exit | Exit the application. |
| ??? | Another feature of your choice. |

What am I looking for is:

- A user interface that makes sense and doesn't need an instruction manual.
- Good control names in the forms designer.
- Control over what the user enters.
- Some code.

Have fun with this assignment.
